Office Action Summary	Application No. 10/656,730	Applicant(s) ISTEPHANOUS ET AL.	
	Examiner DAVID J. ISABELLA	Art Unit 3738	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Non-elected claims 1-16 have been cancelled.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 12-22 are rejected under 35 U.S.C. 103(a) as being unpatentable over Weaver (6641776) in view of either of Tomonto (6264687) or Schwartz et al (5443496).

Weaver discloses a method for making a modulated stent comprising the steps of:

coumpounding a mixture of at least one metal alloy and at least one polymer binder;

molding the mixture to form a composite structure having a strut member and a supporting member;

removing the binder from the composite structure;

sintering the composite structure.

Weaver describes the method referring principally to the embodiment disclosed in Patent No. 5972027, however, states that the invention is not limited to the preferred embodiments but may cover various modification and equivalent arrangements. Each of Schwartz et al and Tomonto teaches fabrication stent from individual segments which are then interconnected to form a unitary device. Advantages for these types of stents are known in the art including better flexibility and conformity for complex body passageways. To make a plurality of adjacent stent segments by the process of Weaver and connecting the adjacent segments together on a mandrel by a flexible fastening means to yield a unitary stent that has flexibility and conformity properties that better compliment complex body passageways would have been obvious to one with ordinary skill in the art from the teachings of either of Tomonto or Schwartz et al.

Claims 18,19,21 and 22, see column 5, lines 1+.

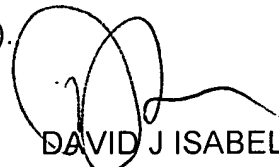

Claim 20, see column 1, lines 35+ and column 4.
